

Website Content Guide

How to update the text, images, menus and contact details on your website — written for people who don't work in software.

The four things to remember

1. **You edit the website through a private admin area** — your normal website address followed by `/admin`.
2. **Every change goes live the moment you click Save.** There is no separate “publish” step and no draft mode.
3. **You change words, pictures, lists and links.** Layout, colours and page design are fixed by your developer.
4. **Some content is legally sensitive** — read Section 8 before touching Proprietary Technologies or Ongoing projects.

Audience

Website content owner / administrator

System

Payload CMS admin panel

Version

Handover edition

1 Getting into the admin area

Signing in, forgotten passwords, and what you see first.

2 How the system is organised

Collections, Globals and the Media library, explained in plain English.

3 The six everyday tasks

Edit text, add an item, reorder, add a picture, add a list row, remove an item.

4 “I want to change X” — the lookup table

Find any part of any page and the exact place to edit it.

5 Page-by-page reference

Every section of the site, what it feeds, and what each field means.

6 Menus, footer and contact details

Navigation, Footer and Contact Page settings.

7 Images and the Media library

Sizes, alt text, replacing and reusing pictures.

8 Rules you must not break

Confidentiality and IP wording for technologies and ongoing projects.

9 What the CMS cannot change

The parts that need your developer — so you don’t hunt for them.

10 Troubleshooting and glossary

Common problems, plain-English answers, and a word list.

HOW TO USE THIS GUIDE

You do not need to read it cover to cover. Read Sections 1–3 once, then use Section 4 as your day-to-day map: look up the thing you want to change, and it tells you exactly where to go.

1 Getting into the admin area

The admin area is a private part of your own website. Nobody can see it without a login, and it is not linked from any public page.

1.1 Signing in

- 1 Open a web browser (Chrome, Edge or Safari all work).
- 2 Type your website address followed by `/admin` — for example `www.yourdomain.com/admin` — and press Enter.
- 3 Enter the **email address** and **password** you were given at handover.
- 4 Click `Login`. You land on the dashboard.

Bookmark this page. You will use it every time.

1.2 If you forget your password

- 1 On the login screen, click `Forgot your password?`
- 2 Enter your email address and submit.
- 3 Open the email that arrives and click the reset link.
- 4 Choose a new password and sign in again.

IF NO EMAIL ARRIVES

Check your spam folder first. If it is still missing, contact your developer — password emails are sent by a third-party mail service and occasionally need re-checking.

1.3 Adding or removing people

Logins live under `Users` in the sidebar. To give a colleague access, open `Users` → `Create New`, enter their email address and a password, and save. To remove access, open that person's user record and delete it.

GOOD PRACTICE

Give each person their own login rather than sharing one. If someone leaves, you then only have to delete their account. Everyone with a login can edit everything, so only add people who should be able to change the live website.

1.4 What you see when you sign in

The screen has two parts:

The sidebar (left)

Your table of contents. It has two headed groups: **Collections** (lists of things) and **Globals** (single settings pages). Clicking any name opens it.

The main panel (right)

Either a list of existing items, or the edit form for one item. Edit forms always have a **Save** button at the top right.

1.5 The single most important rule

SAVING PUBLISHES IMMEDIATELY

This website has no draft or preview mode. The instant you click **Save**, the change is live for the public. Reload the public page in another browser tab to check your work — it will already show the new version.

Because of that: write and check your wording *before* you save, and if you are making a large change, copy the old text into a document first so you can put it back.

2 How the system is organised

There are only three kinds of thing in the whole system. Once these click, the rest of the admin area is just detail.

2.1 Collections — lists of things

A collection is a list where every entry has the same shape. **Training Courses** is a collection: there are eight courses, and each one has a title, a duration, modules and so on. Adding a ninth course means adding a new entry to the list, and the website builds its card and its page automatically.

When you click a collection you get a table of the existing entries. Click any row to edit it, or click **Create New** at the top right to add one.

2.2 Globals — one-off settings pages

A global is a single set of fields that exists exactly once. **Footer** is a global: there is only one footer on the website, so there is nothing to list — clicking it takes you straight to the edit form.

2.3 The Media library — your pictures

Media is where every image on the site is stored. You upload a picture once and can then attach it wherever you like. Section 7 covers this in detail.

2.4 Field types you will meet

WHAT YOU SEE	WHAT IT IS AND HOW TO USE IT
Single-line box	Short text: a title, a label, a link. Keep it to the length of the surrounding examples — very long titles can wrap awkwardly on cards.
Large box	A paragraph. Plain text only — no bold or bullets.
Dropdown	A fixed set of choices. You cannot type your own value; the list is deliberately limited so the design stays consistent.
Number box	Usually an ordering number or a count. See §3.3 on ordering.
Repeating list shown with an “Add row” button	A list you build up yourself — bullet points, menu links, course modules. Each row can be dragged by the handle on its left to reorder, and removed with its own menu.
Upload box	An image slot. Either choose an existing picture from the Media library or upload a new one.

WHAT YOU SEE	WHAT IT IS AND HOW TO USE IT
Tabs across the top	Long forms are split into tabs — for example a course has Card , Overview , Curriculum and more. The tabs are all one single item; move between them freely, and one Save saves them all.
A red asterisk *	Required. The form will refuse to save until it has a value. If Save seems to do nothing, look for a red message — possibly on another tab.

2.5 Two field names worth understanding

Slug

A slug is the readable part of a web address. A course with the slug `process-safety` lives at `/training/process-safety` . Slugs must be lowercase with hyphens instead of spaces, and no two items in the same collection may share one.

CHANGING A SLUG CHANGES THE PAGE'S ADDRESS

Anyone who bookmarked or linked to the old address will get a “page not found”, and the page’s search-engine history starts again. Fix a typo in a slug soon after publishing if you must, but avoid changing established ones.

Order

Most collections have an **Order** number that controls the sequence items appear in on the public site. **Lower numbers come first.**

3 The six everyday tasks

Almost everything you will ever do is one of these six. Learn them, and the rest is simply knowing which collection to open — which Section 4 answers.

3.1 Change some wording

- 1 Use the table in Section 4 to find which collection or global holds the text.
- 2 Click it in the sidebar. For a collection, click the row you want.
- 3 Click into the field, edit the text, and check your spelling.
- 4 Click **Save**.
- 5 Open the public page in another tab and refresh to confirm.

3.2 Add a new item to a list

- 1 Open the collection in the sidebar — for example **Projects**.
- 2 Before you start, open an existing entry and note how its fields are filled in. Copying the house style of an existing item is the fastest way to get a good result.
- 3 Click **Create New** (top right).
- 4 Fill in every field marked with an asterisk, working through each tab in turn.
- 5 Set the **Order** number to place it where you want it (\$3.3).
- 6 Click **Save**. The new card, and its own page where the section has one, appear immediately.

A BLANK FIELD IS NOT ALWAYS A PROBLEM

Optional fields are genuinely optional and the design handles them. Leaving a service's image empty, for instance, shows a branded gradient panel — not a broken picture.

3.3 Change the order things appear in

Ordering is controlled by the **Order** number on each item, lowest first. To move an item, give it a number lower than the item you want it to sit above.

The tidiest habit is to number in tens — 10, 20, 30, 40 — because you can then insert something between two items by giving it 15 or 25, without renumbering everything else.

TWO EXCEPTIONS

Training Courses is ordered by **Course Number**, and **Operating Approach Steps** by **Step**. In both, that same number is also *displayed* on the website ("Course 3 of 8", step "02"), and each value must be unique. So changing the order there also changes what visitors read — plan the whole sequence before you edit.

3.4 Add or replace a picture

- 1 Open the item you want to illustrate and find its image field.
- 2 To reuse a picture already on the site, click **Choose from existing** and pick it.
- 3 To use a new picture, click **Upload** and select the file from your computer.
- 4 Fill in the **Alt** text — a short factual description of what the picture shows. This is required, and it is what visually impaired visitors hear.
- 5 Click **Save**.

To swap a picture out, remove the current one with the **x** on the thumbnail, then choose or upload the replacement.

3.5 Add a row to a repeating list

Bullet points, menu links, course modules and process stages are all repeating lists.

- 1 Scroll to the list and click **Add row** at the bottom of it.
- 2 Fill in the fields that appear.
- 3 Drag the handle at the left of any row to move it up or down.
- 4 To delete a row, open the small menu at its right and choose **Remove**.
- 5 Click **Save**.

SOME LISTS SHOW ONLY THE FIRST FEW ENTRIES

A course's **Key Areas** list, for example, shows only its first five entries on the landing-page card, though the full list is used on the course page. Put the strongest points at the top.

3.6 Remove an item

- 1 Open the item.
- 2 Choose **Delete** from the controls at the top of the form and confirm.

DELETING CANNOT BE UNDONE

There is no recycle bin and no version history. Once an item is deleted, its content and its page are gone, and anyone holding a link to that page will see "page not found".

Safer alternative: if you only want something out of sight for a while, copy its text into a document first, or move it to the bottom of the order — then you can restore it later. If you are unsure, ask your developer before deleting.

4 “I want to change X” — the lookup table

Find the page and the part of it you want to change; the right-hand column names the exact place in the sidebar. This is the section to keep to hand.

Home page /

THE PART OF THE PAGE	WHERE TO EDIT IT
Main headline and opening statement	Fixed in the design — ask your developer
The “Request Proposal” button (label and destination)	Navigation global → CTA Label / CTA Href
Discover → Deliver approach sequence	Operating Approach Steps
The three service cards	Services → Card tab
“Why Resolvent Global” cards	Why Us Points
Industries explorer (the tabbed list)	Industries
The credibility strip near the bottom	Credentials

About page /about

THE PART OF THE PAGE	WHERE TO EDIT IT
Hero title, description and background video	Fixed in the design — ask your developer
Company overview and technical foundation prose	Fixed in the design — ask your developer
“At a glance” figures	Fixed in the design — ask your developer
The numbered operating approach	Operating Approach Steps
“Principles Behind Our Practice” cards	Values

Services /services and /services/...

THE PART OF THE PAGE	WHERE TO EDIT IT
Home-page card: icon, short title, bullets, image	Services → Card tab
Listing band: accent colour, tagline, long title, intro, checklist	Services → Listing Band tab

THE PART OF THE PAGE	WHERE TO EDIT IT
Detail page: scope items, deliverables, outcomes, who we work with	Services → Detail Page tab
Order of the three services across the whole site	Services → Order

Industries /industries

THE PART OF THE PAGE	WHERE TO EDIT IT
The sector panels and their capability lists	Industry Sectors
The tabbed explorer on the <i>home</i> page	Industries — a separate list, see §5.3

Training /training and /training/...

THE PART OF THE PAGE	WHERE TO EDIT IT
Landing page hero and positioning paragraphs	Training Page global → Hero tab
Category headings that group the portfolio	Training Page global → Categories tab
Delivery options (shared by every course)	Training Page global → Delivery Options tab
Corporate section and closing call to action	Training Page global → Corporate & CTA tab
Anything about one specific course	Training Courses → that course

Projects /projects and /projects/...

THE PART OF THE PAGE	WHERE TO EDIT IT
Any project card or project page	Projects → that project
Which filter group a project sits in	Projects → Card tab → Category
The closing call to action on a project page	Projects → Value & CTAs tab

Proprietary Technologies /proprietary-technologies

THE PART OF THE PAGE	WHERE TO EDIT IT
----------------------	------------------

THE PART OF THE PAGE	WHERE TO EDIT IT

Hero, positioning, NDA wording, engagement pathways, CTA	Proprietary Technologies Page global

Contact, menus and footer every page

THE PART OF THE PAGE	WHERE TO EDIT IT
Contact details card and “what to expect” steps	Contact Page global
Top menu items and dropdowns	Navigation global
Footer links, email, phone, addresses, social profiles	Footer global
The contact form fields and where enquiries are emailed	Fixed in the design — ask your developer
Privacy Notice and Terms of Use wording	Fixed in the design — ask your developer

5 Page-by-page reference

What each collection controls, and what every field is for. Use this when you are filling in a field and want to be sure what it does.

5.1 Services

Three entries, one per service platform. Each entry feeds *three* different places on the website, which is why the form is split into tabs. Editing **Title** on the **Card** tab changes the home-page card; editing **Full Title** on the **Listing Band** tab changes the services page and the detail-page hero.

FIELD	WHAT IT DOES
Slug	Builds the web address <code>/services/{slug}</code> , and ties the three tabs together internally. Do not change it casually.
Order	Position of this service everywhere on the site. Lower first.
Card tab — the home-page card	
Icon	Chosen from a fixed list of approved icons.
Title	Short card title, e.g. "Operations". Keep it to one or two words.
Bullets	The short points listed on the card.
Image	Optional card visual. Left empty, the card shows its branded gradient panel.
Listing Band tab — the /services page	
Accent Color	A hex colour code such as <code>#0B7A53</code> — a hash then six characters. An invalid code breaks the band's colouring, so copy the format from an existing service.
Tagline	A short phrase, e.g. "Operate better".
Full Title	The long title used on the services page and the detail-page hero.
Intro	The introductory paragraph for the band.
Checklist	The ticked points shown in the band.
Detail Page tab — /services/...	
Hero Video	The file path of the background video. Videos are not uploaded through the CMS — leave this alone unless your developer gives you a path. Empty means the shared engineering video is used.
Scope Items	A repeating list; each row is a title plus a description.

FIELD	WHAT IT DOES
Deliverables	What the service produces for a client.
Outcomes	The results a client can expect.
Who We Work With	The typical client profile.

5.2 Training Courses and Training Page

Each course is one entry with seven tabs. Wording on the public site follows the **Category** you choose: *Short Course* and *Applied Course* are presented as “Courses”, while *Integrated Program* entries are presented as “Programs” and given heavier visual weight. You never type the word “Course” or “Program” yourself — set the category and the site does it.

TAB	WHAT LIVES THERE
Card	Title, category, duration (e.g. “~15 h”), number of modules, a one-sentence summary, and Key Areas. Only the first five key areas show on the landing-page card.
Overview	About — one row per paragraph. Learn — the “What You Will Learn” outcomes.
Curriculum	The modules. Each has a number, a title, an indicative duration and its own list of topics.
Audience	Who should attend, prerequisites, and the prerequisite note (e.g. “No prior formal training is required”).
Applied Learning	The practical introduction, the exercises, the case-study paragraphs and the workflow steps. Capstone Title and Final Deliverables apply to Integrated Programs only — leave them blank for Courses.
Outcomes	Resources provided, what participants gain, and areas of application.
Final CTA	The heading and text of the closing call to action on that course’s page.

Outside the individual courses, the **Training Page** global holds everything shared: the hero, the category headings, the corporate section, the closing CTA, and the delivery options.

TWO THINGS TO KEEP IN STEP

Delivery options are stored once on the Training Page global because they are identical for all eight offerings — edit them there and every course updates.

Category names must match. The category on a course and the category on the Training Page grouping must be the same value, or the course will not appear under its heading. Both use the same dropdown, so just make sure you pick the same option in both places.

5.3 Industries and Industry Sectors

These are two separate lists that are easy to confuse:

Industries The tabbed explorer on the home page — an icon and label on the left, a description and image on the right. Tab Id is an internal identifier, not a web address. Leave it alone unless you are creating a new entry, and then use short lowercase text with no spaces.	Industry Sectors The sector panels on the /industries page — each with an icon, title, description, a capability list and a required image. Both lists require an image, so have a picture ready before you create an entry.
---	--

5.4 The short card lists

Four collections share the same simple shape — an order number, an icon, and a little text. They are quick to edit and hard to get wrong.

COLLECTION	WHERE IT APPEARS, AND ITS FIELDS
Why Us Points	Home page, “Why Resolvent Global” cards. Icon, title, description.
Values	About page, “Principles Behind Our Practice”. Icon, title, description.
Credentials	Home page credibility strip. Icon, title, subtitle. Keep both lines short — this strip is compact.
Operating Approach Steps	Home and About pages. Step number, title, description. The step number is both the order and the number shown on screen, and must be unique.

5.5 Projects

The portfolio. Each project has a reference such as **P04** or **O02** , and the **Category** you choose determines how the page is presented.

TAB	WHAT LIVES THERE
Card	Category, title, one-line caption, status badge (e.g. “Market-ready service”), description, optional image, and the labels for the animated process diagram on the hero.
Delivered Capability	For the delivered P-series projects: the challenge, the approach, the numbered approach pathway, the deliverables and the target sectors.
Ongoing (Confidential)	For the O-series projects only: a disclosure note, the development focus, applications and application tags.

TAB	WHAT LIVES THERE
Value & CTAs	Value pillars (each a pillar name and what it means), the card and detail-page button labels, and the closing call to action.

THE ONGOING RULE

Setting **Category** to **Ongoing** switches the project page to its confidential presentation, which deliberately shows no approach pathway and no deliverables. **Leave the entire Delivered Capability tab blank for an Ongoing project** — filling it in would publish exactly the information that presentation exists to protect. Section 8 sets out the wording rules.

5.6 Proprietary Technologies

The public IP portfolio, and by design the shallowest part of the whole CMS. Each entry carries only four things: a name, an IP status, a single line of positioning, and a visual. There is no detail page and no long-description field, because the purpose of this page is to attract qualified enquiries under NDA — not to explain the technology.

FIELD	WHAT IT DOES
Order	Position in the portfolio. Lower first.
Title	The technology area, e.g. "Microwave System".
IP Status	Only two values are allowed — Patent Pending or Proprietary Process . Consistent wording here is a handover requirement.
Positioning	One short approved line, e.g. "High-temperature industrial heating". Nothing more.
Motif	An abstract graphic — waveform, membrane stack or lattice. It illustrates a theme only and never depicts a real process route.
Image	Optional. Industrial or science photography only. Leave empty to use the motif.

The surrounding page copy — hero, positioning paragraphs, the confidentiality panel, engagement pathways and the closing CTA — is in the **Proprietary Technologies Page** global, split across its five tabs. The NDA wording sits in the CMS specifically so that legal or IP review can change it without a software release.

6 Menus, footer and contact details

6.1 Navigation — the top menu

Open the **Navigation** global. **Nav Links** is a list of top-level menu items in the order they appear.

Each top-level item is one of two things, and never both:

- **A plain link.** Give it a **Label** and an **Href**, and leave **Children** empty.
- **A dropdown.** Give it a **Label**, leave **Href** empty, and add rows under **Children** — each with a label, a destination and an optional one-line hint.

TWO RULES

A dropdown heading is not itself a clickable page. If the group has a landing page, add it as the first child — for example a “Services” dropdown whose first child is “All Services”.

Only one level of nesting is supported. There is no way to put a dropdown inside a dropdown, and that is deliberate: deeper menus are hard to use on phones.

Addresses in **Href** should start with a slash for pages on your own site — **/training**, **/projects** — and with **https://** for anywhere else. Always click the link on the live site afterwards; a typo here produces a “page not found” on every page of the website at once.

The two **CTA** fields at the bottom control the “Request Proposal” button. That same label and link are reused by the home-page hero and the call-to-action band, so changing them here changes all three places.

6.2 Footer

FIELD	WHAT IT DOES
Services Links Legal Links	The two link columns. Each row is a destination and a label.
Social Links	Your profiles, shown as icons in the order listed. Choose the platform from the dropdown — LinkedIn, Facebook, Instagram or X — and paste the full URL including https:// . Only those four are available, because each needs a hand-drawn brand icon in the design.
Contact Email Contact Phone	The footer contact details.
Addresses	One row per office: a label and the address itself.

WHY THE SOCIAL LINKS MATTER MORE THAN THEY LOOK

They are also published in the page's machine-readable data, which is how search engines connect those profiles to your business. Keep them accurate, and remove any profile you no longer use.

6.3 Contact Page

The **Contact Page** global holds two lists:

- **Contact Info Items** — the details card in the hero. Each row is an icon, a label ("Email", "Phone") and the value.
- **Expect Steps** — the "what happens next" sequence. Each row has a step, a title and a description. The step is typed as text rather than a number so that a leading zero is preserved: enter `01`, not `1`.

The enquiry form itself — its fields, its enquiry types, and the address enquiries are sent to — is built into the site and is not editable here.

7 Images and the Media library

7.1 How it works

Every picture lives in **Media**. Upload it once and attach it to as many items as you like. Uploading the same photo twice creates two copies, so check whether it is already there before adding a new one.

7.2 Alt text is required

Every upload needs **Alt** text: a short, factual description of what the picture shows, for visitors using a screen reader and for search engines. Write "Wastewater treatment plant aeration basin", not "image1" or "photo". It is also what identifies the picture in the Media list, so good alt text makes pictures easy to find again later.

7.3 Practical advice

- **Images only.** The library accepts image files. Videos are handled separately by your developer as fixed site files.
- **Use landscape photographs.** Every image slot on the site is a wide card or panel; portrait photos will be cropped.
- **Aim for roughly 1600–2000 pixels wide** and keep files under about 500 KB where you can. Very large files slow the page down for visitors.
- **Only upload pictures you have the right to use.** Stock photography usually comes with licence conditions.

7.4 Where images are required, and where they are optional

IMAGE SLOT	REQUIRED?
Industries — home-page explorer	Required. You cannot save an entry without one.
Industry Sectors — /industries panels	Required.
Services — home-page card	Optional. Empty shows the branded gradient panel.
Projects — hero visual	Optional. Empty shows a branded placeholder.
Proprietary Technologies — card	Optional. Empty shows the abstract motif.

7.5 Deleting pictures

CHECK BEFORE YOU DELETE

A picture can be used in more than one place. Deleting it from the Media library removes it everywhere it appears, and the CMS will not necessarily warn you. If you no longer want a picture on a particular item, remove it from that item instead of deleting the file.

8 Rules you must not break

Most of this CMS is safe to experiment with. Two parts are not, because what is published there affects your intellectual property and your confidentiality obligations. Read this section before editing either.

NEVER PUBLISH, ANYWHERE ON THE SITE

- Process routes, process flows or reaction pathways
- Operating conditions or operating windows — temperatures, pressures, residence times, concentrations
- Recipes, formulations or material specifications
- Equipment design details, drawings, schematics or annotated equipment photographs
- Laboratory or pilot results, yields or performance data
- Commercial strategy, pricing structures, or named client information given in confidence

8.1 Proprietary Technologies

The page exists to generate qualified enquiries under NDA. That is why an entry has room for a name, a status and a single line of positioning, and nothing else — there is no long-description field to fill because there is not meant to be one.

- **Positioning must be pre-approved wording** and stay at the level of “High-temperature industrial heating”.
- **IP Status uses only the two values in the dropdown.** Do not seek other wording; consistency across the portfolio is a handover requirement.
- **Motifs are decorative.** They illustrate a theme and must never be read, or described, as a real process.
- **Card images must be general industrial or science photography.** No drawings, no schematics, no annotated equipment.
- **Do not remove the NDA wording.** The confidentiality requirement is meant to appear twice — beside the portfolio and again beside the contact CTA. Both placements are in the Proprietary Technologies Page global, and both should stay filled in.

CHANGES TO NDA AND CONFIDENTIALITY WORDING

This wording sits in the CMS so that legal or IP review can update it without a software release. That is also why it should only be changed *through* that review: final wording is to be signed off by Resolvent Global and, where appropriate, an IP advisor.

8.2 Ongoing projects (the O-series)

Ongoing projects describe development work that is still confidential. They must not carry a Resolvent Global approach, an approach pathway, deliverables or target sectors, because any of those can disclose the IP pathway. They use the disclosure note, development focus and applications fields instead.

- Set **Category** to **Ongoing**, which switches the page to its confidential presentation.

- Fill in the **Ongoing (Confidential)** tab only.
- Leave the whole **Delivered Capability** tab blank.
- Keep the language high-level throughout — describe the problem being addressed and the areas of application, never how the work is done.

8.3 When in doubt

If you are not certain whether a sentence is safe to publish, do not publish it. Send it to whoever owns technical and IP sign-off at Resolvent Global first. Remember that saving is immediate: there is no window in which a mistake is invisible to the public.

9 What the CMS cannot change

These parts are built into the website rather than the CMS. They are listed here so you don't spend time hunting for a setting that does not exist. Any of them can be changed — it just needs your developer.

AREA	WHY IT NEEDS A DEVELOPER
Page layout, fonts, colours	Part of the design system, applied consistently across every page.
Home-page headline and opening statement	Written into the hero section of the page.
About-page prose and “at a glance” figures	Written into those page sections.
Background videos	Shipped as fixed site files, not uploads. A service's Hero Video field takes a path your developer provides.
Privacy Notice and Terms of Use	Standalone legal pages held in the site itself. Send revised wording to your developer.
The contact form	Its fields, its enquiry types, and the address enquiries are emailed to.
The icon lists	A fixed approved set. New icons have to be added to the design first, after which they appear in every icon dropdown.
Adding a whole new page or section	A new page needs both a design and the code to render it.
Menu depth	One level of dropdown is supported, by design.
Social platforms beyond the four listed	Each needs a brand icon drawn into the design.

A USEFUL WAY TO THINK ABOUT THE SPLIT

The CMS owns anything that is **a list of similar things** or **a piece of copy that changes over time**. The website owns anything that is **a one-off piece of design**. If what you want to change would look different from everything around it, it is probably a developer job.

10 Troubleshooting and glossary

10.1 Common problems

WHAT YOU SEE	WHAT TO DO
Save does nothing, or an error appears	A required field is empty. Look for red text — and check the <i>other tabs</i> , since the problem is often on a tab you are not currently looking at.
“Value must be unique”	Another item already uses that slug, project reference, course number or step number. Choose a different one.
My change isn’t showing on the site	Hard-refresh the public page: Ctrl + F5 on Windows, Cmd + Shift + R on a Mac. If it still looks old, confirm you actually clicked Save, and that you edited the right item — remember Services text lives on three different tabs.
A new course isn’t under its heading	Its Category does not match a category on the Training Page global. Make both the same option.
Items are in the wrong order	Check the Order numbers — lowest appears first. For courses use Course Number; for approach steps use Step.
A menu link gives “page not found”	Check the Href in the Navigation global. Internal pages start with / ; external links need the full https:// address.
A colour looks wrong on a service band	The Accent Color must be a valid hex code — a hash plus six characters. Copy the format from another service.
A picture looks stretched or badly cropped	Use a landscape image around 1600–2000 pixels wide. Portrait photos get cropped to fit wide cards.
I deleted something by mistake	Contact your developer straight away — there is no undo in the CMS, and the sooner it is raised the better the chance of recovering it from a backup.
I can’t log in	Use “Forgot your password?”. If the reset email never arrives, contact your developer.

10.2 Before you click Save — a quick checklist

- Have I read the text back for spelling and tone?
- Are all required fields filled in, on every tab?
- If I added a picture, does it have proper alt text?
- Is the Order number where I want this item to sit?
- If this touches Proprietary Technologies or an Ongoing project — does it stay within Section 8?
- Am I ready for this to be public in the next second? Because it will be.

10.3 Glossary

TERM	PLAIN ENGLISH
CMS	Content Management System — the admin area where you edit the website without touching code.
Collection	A list of similar items, such as Projects or Training Courses.
Global	A single settings page that exists once, such as the Footer.
Field	One box you type in or choose from.
Slug	The readable end of a web address, e.g. <code>process-safety</code> in <code>/training/process-safety</code> .
Href	The destination of a link. Internal pages start with <code>/</code> ; external links need <code>https://</code> .
CTA	Call to action — a prompt and button asking the visitor to do something.
Hero	The large banner area at the top of a page.
Alt text	A short description of a picture, read aloud by screen readers.
Hex code	A colour written as a hash plus six characters, e.g. <code>#0B7A53</code> .
Media library	Where all uploaded pictures are stored.
P-series / O-series	Delivered projects (P) and ongoing confidential development (O).
NDA	Non-disclosure agreement — the confidentiality agreement required before technical detail is shared.

Resolvent Global — Website Content Guide. Prepared for handover. Keep this document with your login details, and pass both on to whoever takes over the website.
